# Abhishek Verma

**Bachelor of Technology (Computer Engineering) 2023-27**

| abhishek8432447171@gmail.com | LinkedIn +91 8432447171 | GitHub |
|---|---|---|

## Educational Background

| Degree | Institute | Score | Year |
|---|---|---|---|
| B.Tech (Computer Engineering) | Savitribai Phule Pune University | 7.23 CGPA | 2023-2027 |
| Class XII, Science | Board | 58.00% | 2022-2023 |
| Class X, General Studies | Board | 68.40% | 2020-2021 |

## Internship

| Cisco | Intern | Jun 2025 – Aug 2025 |
|---|---|---|

• Gained hands-on experience in network security, threat detection, and risk management by identifying vulnerabilities, monitoring network traffic, and implementing security measures such as firewalls, encryption, VPNs, and SSL to strengthen system security and reduce cyber risk
• Collaborated on cybersecurity projects and incident response, analyzing potential threats, proposing security improvements, and using industry standard tools to enhance network usage, data protection, and overall security posture while supporting proactive threat mitigation

| Smartbridge PVT LMT | Intern | Jul 2025 – Aug 2025 |
|---|---|---|

• Developed a machine learning model for Electric Motor Temperature Prediction by performing data preprocessing, feature selection, and exploratory data analysis (EDA) to improve prediction accuracy, optimize performance, reduce errors, and support efficient motor operation
• Trained and evaluated regression models, including Linear Regression and Random Forest, to forecast motor temperature, helping prevent overheating while enhancing model performance, prediction accuracy, supporting predictive maintenance, and predictive reliability

## Projects

| Cattle Health Monitoring System | Sensor Assembly & Configuration | 2024-2025 |
|---|---|---|

• Assembled and configured DHT22 (box temperature and humidity) and DS18B20 (body temperature) sensors for real-time cattle health monitoring. Ensured wiring, sensor placement and calibration for data collection and reliable performance in various environmental conditions
• Programmed the ESP8266 microcontroller to interface with sensors, collect data, and transmit it over WiFi. Configured the system to provide regular updates every 3 seconds for continuous monitoring, optimizing performance for real-time health tracking and efficient data transfer
• Designed and implemented a real-time IoT monitoring dashboard using HTML, JavaScript, Leaflet.js, Arduino IDE, and JSON, integrating live sensor data and GPS tracking while ensuring accurate monitoring, efficient data transmission, low-latency system performance and reliability

| Voice Assistant with Web Navigation | Developer | 2025 |
|---|---|---|

• Developed a voice-activated assistant ("Jarvis") using Python libraries for speech recognition (speech_recognition), text-to-speech (pyttsx3), and web automation (webbrowser, pyautogui). The assistant listens for commands and provides verbal responses to perform various tasks
• Programmed voice commands to open specific websites (Google, YouTube, Instagram, Gmail, Instagram Profile, etc.) and automate browser actions like closing tabs. Utilized webbrowser for seamless website navigation to simulate keyboard actions like closing tabs and opening tabs.
• Integrated music control functionality, allowing users to request songs by name, which are then played through YouTube links stored in a predefined dictionary. Feature was optimized for ease of use, quick song retrieval, and minimal latency, enhancing the overall user experience
• Developed a real-time voice assistant with continuous speech processing, web automation, and enhanced error handling to deliver accurate, reliable, and responsive voice interactions across varying noise conditions, ensuring seamless user experience and improved response latency

## Certifications

| | |
|---|---|
| **Certifications** | • Python Certified Associate Programmer - Demonstrated proficiency in core Python programming, data structures, object-oriented programming (OOP), and software development practices with hands-on coding experience<br>• Cybersecurity Essentials - Acquired foundational knowledge of network security, cyber threats, risk management, encryption, firewalls, and threat mitigation to secure systems and data against evolving cyber vulnerabilities<br>• CCNA: Introduction to Networks (Cisco Networking Academy) - Gained knowledge of networking fundamentals, OSI & TCP/IP models, IPv4/IPv6 addressing, subnetting, Ethernet, switching, routing, and network troubleshooting<br>• CCNA: Switching, Routing, and Wireless Essentials (Cisco Networking Academy) - Developed practical skills in switching, VLANs, inter-VLAN routing, wireless networking, enterprise network configuration, and network security<br>• CCNA: Enterprise Networking, Security, and Automation (Cisco Networking Academy) - Learned enterprise network architectures, SDN, VPN technologies, automation, advanced troubleshooting, and enterprise security principles |

## Skills

| | |
|---|---|
| **Hard Skills** | Python \| C \| C++ \| Wireshark \| Linux \| SQL \| Network Security \| MS Excel \| Canva \| Wazuh \| Artificial Intelligence \| ML \| Computer Networking \| TCP/IP \| SIEM \| Log Analysis \| Incident Response \| DNS \| Ipv4/Ipv6 \| DFIR \| Windows |
| **Soft Skills** | Analytical Reasoning \| Problem Solving \| Leadership \| Time Management \| Attention to detail \| Creativity |

## Others

| | |
|---|---|
| **Extracurricular** | • Contributed with iVolunteer to paint and revitalize community spaces for an NGO enhancing local environments, advancing grassroots initiatives, and fostering sustainable engagement through civic collaborative team efforts |
| **Hobbies** | • Enthusiastic about motorcycling, car driving, and music, with a keen interest in exploring new travelling routes |
